

- 1) What is ALOHA and what are its drawbacks? How CSMA/CD overcomes it? Explain in brief the flowchart of CSMA/CD.
- 2) Differentiate between OSI and TCP/IP layer.
- 3) OSI layer architecture is a reference model. Support this statement and explain the basic function of each layer.
- 4) Write the advantages of layered network model.
- 5) Explain the concept of addressing in each layer of TCP/IP model.
- 6) Define X.25, frame relay and ATM briefly
- 7) What is PDU?
- 8) Differentiate between LLC and MAC sublayer of OSI reference model?
- 9) Explain different types of signal impairments in communication systems.
- 10) What do you mean by propagation? Why do you need it? Explain with different propagation mechanism.
- 11) Why wireless propagation is important? Explain types of propagation.
- 12) Explain working principle of optical fibre. What is the importance of cladding in optical fibre?
- 13) Compare guided transmission media in terms of bandwidth, channel capacity, SNR, security, cost, attenuation, delay and repeater spacing.
- 14) Explain the electromagnetic spectrum and its application in wireless transmission media with their modes of propagation.
- 15) Explain the working principle of satellite communication.
- 16) Explain different signal impairments with their preventive measures and necessary diagram.
