

Unit 4

Human Resource Management and Control

- It is a tradition approach to managing people in organization. HRM focuses on Human resource administration, compensation, employee welfare and relations. It is discipline control oriented.
- HRM is concerned with compliance of policies and rules.

According to....

Delenno and Robins: Human resource management is the traditional function responsible for the management of human resources.

U.K. Institute of Human resource Management: Human resource management is an integral part of management concerned with people at work and their relationship within an enterprise.

Michael Jucious: Human resource management is that field of management which has to do with planning, organizing, and controlling various operative functions of procuring, developing, maintaining and utilizing labor force to achieve organizational objective.

Objectives of Human resource management

- To best utilize organizational manpower
- To ensure that organizations get the right type of people, in right quantity, at right time and places
- To create and maintain an organizational climate conducive to the development of people
- To establish desirable working relationship among the members of employees
- To maintain a high morale by ensuring the development of highly effective work Group.

Functions of Human resource management

- **Acquisition function:** The prime function of a manager is to ensure that it has the right number and kind of people, at the right places and time. These people work to accomplish goals of the organization. This function includes recruitment, selection, socialization, job analysis etc.
- **Development function:** This function ensures proper competencies of employees to handle jobs. The need for development function arises because competent employee will not remain competent forever and employee would be minimally qualified upon entering the organization. The major development functions of PM are employee training, management development and career development.

- **Utilization function:** This function is concerned with using people productively. It ensures willingness of employees for increasing productivity by doing jobs effectively. The major utilization function of PM includes motivation, performance appraisal, and compensation management.
- **Maintenance function:** This function ensures retention of competent employees in organization. It is concerned with providing those working conditions that employed believes are necessary in order to maintain their commitment to the organization. The major maintenance function of PM is employee discipline, labor relations and employee welfare.

JOB

- What is a job?
 - When the total work to be done in an organization is divided and grouped into packages, we call it a job
 - collection of task, duties and responsibilities performed by an individual in exchange of pay

JOB ANALYSIS, JOB SPECIFICATION AND JOB DESCRIPTION

Job Analysis

- Job analysis is the process of determining the task that makes up the job.
- It is the procedure through which the duties for different positions are determined.
- It also tells about the characteristics of people who should be hired for them. It determines the skills; abilities and responsibilities that are required of an individual to successfully accomplish the job.
- It is systematic investigation of the tasks, duties and responsibilities necessary to do a job.

- Job task: identifiable work activity carried out for a specific purpose.
E.g. typing a letter
- Job duty: is a larger work segment consisting of several tasks that are performed by an individual. For e.g. pick up, sort out and deliver incoming call.
- Job responsibilities: obligations to perform certain tasks and duties.
- According to W. French: — “Job analysis is the systematic investigation of job content, the physical circumstances in which the job is carried out and the qualifications needed to carry out job responsibilities. Job analysis has three components; job description, job specification and job performance standards”

Uses of Job analysis

1. Human resource planning
2. Recruitment
3. Selection
4. Placement and orientation
5. Training
6. Counseling
7. Employee safety
8. Job design and re-design
9. Job evaluation

Process of Job analysis (steps)

1. Organizational analysis: linkage between jobs and organizational objectives
2. Collection of job analysis data: required behavior and Human resource qualifications needed to carry out job
3. Selection of representative position to be analyzed
4. preparation of job description
5. Preparation of job specification

Job specification

Job specification states human resource characteristics and qualifications needed to perform the job.

It shows what kind of person to be recruited.

It identifies knowledge, skills and abilities needed to do jobs effectively.

It is a profile of human characteristics need for performing the job.

It is an overall summary of worker requirements. Job specification provide following information:

- Education and training
- Experience
- Physical health
- Skills
- Communication, computer and driving, etc
- Abilities (physical and mental)
- Maturity (capacity to assume responsibilities)

Job description

Job description is the written statement of what the jobholder does.

It provides information about job content, job environment and conditions of employment.

It is a profile of the job.

It is an overall summary of job requirements.

There is no standard format in writing a job description but all job description includes:

- Job identification, job title, level of job
- Location of job (department/physical location)
- Relationship with others
- Job summary
- Duties and responsibilities
- Authority and accountability
- Working conditions
- Machine and material used

Recruitment

Recruitment refers to the process of attracting, screening, and selecting qualified people for a job.

Recruitment is the process of matching the need of applicants and organization.

Recruitment is the process of finding qualified people and encouraging them to apply for work with the organization.

It is concerned with finding right people for right positions at the right time.

According to E.W. Flippo: — “Recruitment is a process of searching for prospective employees and stimulating them to apply for jobs”.

Major stages in recruitment include:

- I. sourcing candidates by advertising or other methods
- II. Screening potential candidates using tests and/or interviews
- III. Selecting candidates based on the results of the tests and/or interviews
- IV. On-boarding (process of helping new employees become productive members of an organization) to ensure the candidate is able to fulfill their new role effectively

Factors affecting recruitment

- **Size of organization:** A large organization will find itself recruiting potential applicants much more often than smaller organization
- **Employment conditions in the community:** Employment conditions in the community where the organization is located will influence how much recruiting takes place
- **Working conditions:** Poor working conditions lead to more turnovers of employees. This demands frequent recruitment efforts
- **Salary and benefits offered:** Salary and benefits offered by the organization also influence turnover of workers. This also influences the need for future recruiting.
- **Growth factor:** Organization that are not growing or that are actually declining will find little to recruit. On the other hand, organizations that are growing rapidly will find recruitment major Human resource functions

Sources of recruitment

‘Known devils are better than unknown angles’

- i. Internal sources
- ii. External Sources

Internal sources

- It involves recruiting within the organization. It is also called internal recruiting.
- It considers present employees as candidates for opening of higher-level jobs in the organization

Merits of internal sources

- Possibility of better selection is high
- Builds higher level of employee morale
- Less time is needed for employees to adapt to new work environment
- Less costly than external recruitment
- Employees feel secure which increase their loyalty and commitment
- It encourages good ambitious individuals
- Talent can be fully utilized
- Regular promotional avenues for employees

Demerits of internal sources

- Limits the choice to internal sources only
- Most internal; recruitment are based on seniority but not on merit
- The morale of employees can be adversely affected by limited opportunities for internal recruitment
- Favoritism may take place
- Management becomes stagnant owing to the lack of new ideas, knowledge and enthusiasms
- Inbreeding
- Bone of contention

External sources

- It involves recruiting from outside the organization. It is also called external recruitment. It gets people outside the organization to apply for jobs. The major external sources are employment exchange, students from reputed educational institutions, candidates referred by unions, walk ins, advertising, employment agencies, labor market, referral, professional organization, etc.

Merits of external sources

- Management has greater choice
- Injection of fresh blood: Facilitates inflow of new idea, knowledge and skills
- Motivating internal employees to work hard and compete with external candidates
- Increases adoptability to external changes
- Balances human resources mix
- Fairness in recruitment is possible

Demerits of external sources

- Very costly and time consuming
- Adversely affects the morale of current employees
- More time will be needed to new employees to adopt to new work environment
- May result in wrong selection of employees

Methods of recruitment

1. Internal methods of recruitment
 - I. **Promotions and transfers:** changes from lower level to higher level(changes in duties, responsibilities, status and values)
 - II. **Job posting:** It involves announcing job openings to all current employees. Vacancies are announced in bulletin board; in-house news sellers; newspaper; circulars; e-mails etc.
 - III. **Employee's referrals:** This is nomination by superiors. It is a word of mouth recruitment
 - IV. **Human resource inventory search:** It is a search of skills inventory currently employed in the organization. It tells management what individuals can do

Direct method

2. Campus recruitment

Guidelines for campus recruiting

- Shortlist campuses
- Choose recruiting team carefully
- Pay smartly, not highly
- Present a clear image
- Do not oversell yourself
- Get in early
- Not everyone fits the bill

Indirect methods

Advertising:

- This is widely used method.
- Its media can be newspaper (print media); billboard or poster (visual media); radio (audio media); or television, cinema (audiovisual media).
- Advertising can be want ads or blind box ads.

Third party methods

- I. **Employment agencies/exchange:** They can be operated by the government; by nonprofit organization, or by privately owned agencies. Management consulting firms are used for recruiting senior managerial level
- II. **Employee referrals:** Current employees recommend their friends and relatives from outside the organization for hard-to-find job skills.
- III. **Write-ins:** They send written enquiries in search of job.
- IV. **Cyberspace:** Prospective candidates send their bio-data through internet
- V. **Trade unions:** They serve as job referrals for recruitment of semi-skilled workers
- VI. **Other external methods:** gate hiring, Labor contractors; older workers; retired Human resource; etc.

Human resource training (on the job and off the job)

- Training is the act of increasing knowledge and skills of employees for doing a particular job.
- Training is an organized way of increasing the working abilities of a jobholder.
- Training is a learning experience in that it seeks a relatively permanent change in an individual that will improve his ability to perform on the job.
- Training serves as a balancing factor between employee's capabilities and job requirement. The major outcome of training is learning.

Features of training

- Increases knowledge and skills for doing a particular job
- Focuses attention on the current job
- Concentrates on individual employees
- Tends to be more narrowly focused and oriented toward short-term performance concerns

Benefits of training

- Helps employees to perform their job effectively
- Helps to prepare existing employees for higher level jobs
- Aids productivity and quality improvements
- Heightens employee morale and job satisfaction
- Improves labor relations and organizational climate
- Better safety; reduces accidents
- To make employees more mobile and versatile

Different types of training

- Skill training
- Refresher training
- Orientation training
- Cross-functional training
- Promotional training
- Job training
- Remedial training
- Safety training
- Team training
- Creativity training
- Diversity training
- Literacy training

Training method

1. On the job training
2. Off-the-job training

On the job training

(Methods of on-the-job training)

Job instruction training: It is directly related to specific work situation. It is a systematic step-by-step approach to on the job training to teach new task. Four steps involved in job instruction training are ; Preparation, Presentation, Performance try out and follow up.

Apprenticeship training: Employees learn by working with those already skill in their job. Some examples are plumbers, carpenters, electricians, and accountants. Its duration varies job to job generally 2 to 5 years.

Internship training: It is provided to skilled and technical Human resource. The trainee is interned in organization for a specified period and works as an employee. Students of technical subjects generally undergo internship training.

Coaching: learning by doing

mentoring: senior grooming junior

Job rotation: changing job types

Committee assignment: trainees are asked to solve an actual organizational problem. They have to work together and offer solution.

Off-the-job training

The training takes place outside the work situation. It is mostly classroom based.

Method of off-the-job training:

- **Simulation exercises/vestibule training:** Simulation is abstraction of real work conditions in the lab or classroom. The trainee is placed in an artificial environment that closely resembles actual working conditions. Computer modeling is an example. Airlines use simulation to train pilots. It can be computer modeling or vestibule training.
- **Programmed instruction:** It can be in the form of programmed text or manuals. It condenses information to be learned into organized and logical sequences. Trainees are required to provide feedback on their learning progress. Computer assisted instructions and interactive video training are widely used for the delivery of programmed instruction.

- **Lecture/conference:** It is based on talking and showing. It is oral communication of specific information by instructor to trainees. It is teacher-oriented training by telling. Audio-visual tools are used.
- **Experimental/ role-play:** They are short structured — learning by doing experiences. Role play is an example of such exercises. Role-plays are human interaction involving realistic behavior in imaginary situations. Trainees act roles to learn behavior appropriate for the job.

PERFORMANCE APPRAISAL

- Performance appraisal is systematic formal appraisal of an employee's performance on the job and his potential for assuming future responsibilities. It assesses the relative worth of each employee.

According to Edwin B. Flippo: — PA is a systematic, periodic and so far as humanly possible an impartial rating of employee's excellence in matters pertaining to his present job and to his potentialities for a better job.

According to Dale S. Beach: — PA is the systematic evaluation of individuals with respect to their performance on the job and their potential for development

Performance Appraisal methods

i. Job standard-oriented method:

It is based on absolute standards. They can be of the following types:
Here the rater writes a

- **Essay method or free form narrative essay** describing an employee's (a) strength and weakness; (b) job performance during appraisal period; (c) technical effectiveness; (d) leadership ability; (e) promotional potential; (f) training and development needs; (g) suggestions for improvement. This essay is based on qualitative impression on the rater.

- **Checklist method:** Here, a list of behavior is developed and the rater checks off. It is widely used by government office. It can be simple or weighted.
- ✓ **Simple checklist:** It is a list of descriptive statement of employee behavior and characteristics. The rater checks off yes or no behavior that apply to the employee.
- ✓ **Weighted checklist:** The statement in the simple checklist is weighted by assigning points according to importance.

- **Forced choice method:** The rater is forced to choose between two or more statements that are most or least descriptive of the employee being appraised. It consists of special type of checklist. Checklists items are arranged in groups.
- **Critical incident method:** This method focuses on job performance. This consists of written description of effective or ineffective worker behavior related to performance in critical situations. Such situations are called incidents. The supervisors record such incidents. The critical incidents are analyzed to evaluate employees' performance.

- **Rating scale method (graphic rating method):** It is the most widely used method of performance appraisal. The rater provides a subjective evaluation of an employee's performance and traits along a scale. The following factors can be evaluated- quality and quantity of work, job knowledge, attendance, loyalty, dependability, honesty, integrity, attitude, etc. A printed form is generally used for evaluation
- **Behaviorally anchored rating scale:** This method is a combination of critical incident method and rating scale method. Here, the rating scale is anchored with critical incidents to make the evaluation job specific.

ii. Comparison-oriented methods:

They are based on relative standard

- **Individual ranking:** The evaluator lists the employees in a rank order from highest to lowest on the basis of overall performance. Only one employee can be best or worst.
- **Group under ranking:** The evaluator places employees in particular classification such as top 20%, second 20%, bottom 20%, etc.
- **Paired comparison:** The evaluator compares each employee with every other employee on a one-on-one basis in terms of overall performance. Pairs of employees are formed. Better performer in each pair is identified. The overall rank of employee is determined by the number of times chosen as better performer in total pairs

iii. Objective-oriented method

It is based on objective. It can be:

- **Management-by-objective:** Performance appraisal is based on how well the time-bound objectives have been accomplished. The manager and the subordinate jointly set the objectives. The emphasis is not on activities but on results achieved.
- **Appraisal interview:** It is a face-to-face discussion and review of performance appraisal with the employee. It is conducted after the performance evaluation has been formally done. Generally, it is conducted on one-to-one basis.

Importance of performance appraisal

- **Performance feedback:** PA helps to identify job related strengths and weakness of employees. Feedback can be given to employees as cut their performance rating. This helps to enhance employee effectiveness.
- **Reward management:** PA provides an objective basis for decision regarding reward system. Pay rise is generally based on performance of employee.
- **Training and development decision:** PA indicates performance deficiencies in employees. They serve as a guide for identifying training and development needs.
- **Career planning:** PA is central to an organization's career planning process because it provides a good opportunity to review person's career plans in light of his/her exhibited strengths and weakness.

- **Supervisory understanding:** PA encourages supervisors to observe the job performance of their subordinates. This helps to develop good communication and understanding between the supervisors and subordinates.
- **Validation of selection tests:** PA results can be compared with the scores of selection tests to find out the validation of selection tests.

Challenges in managing people in ICT workforce

1. Lack of Communication
2. Cybersecurity Threats
3. Budget Constraints
4. Talent Shortages
5. Legacy Systems
6. Keeping Up with Technology Trends
7. Managing Remote Teams
8. Managing Data
9. Managing Vendor Relationships
10. Managing Change

Control

HR controlling is an essential means for **planning, managing, and controlling** all employee-related processes. The purpose is to align the goals in the field of human resources and the general corporate goals.

The following questions are usually posing an overall starting point for HR controlling and the identification of the right key figures:

- How many employees are currently employed in the company?
- What are the corresponding personnel costs?
- How efficiently are goals being achieved?

Based on the answers to these questions, HR controlling can then be employed. Depending on the potential for improvement, the right approaches are identified. This applies to individual, team, and corporate goals.

- In an organization from the president to a supervisor, the function that is performed with utmost care and respect is the controlling process. Here control refers to the task that ensures that the activities are producing the required goals and targets.
- Thus, controlling helps in monitoring what will be the outcome of the activities. Furthermore, it reviews the feedback information about this outcome. And also provide us with the necessary course of action. It is stated that the control is a function that is very closely connected to the planning.
- In an organization, we can widely find three kinds of control.

Kinds of Control

In modern organizations, there are three kinds of control that you will usually find,

- Concurrent control
- Feedback control
- Feedforward control

Concurrent Control

- This control can also be referred to as steering or real-time control. Thus, this control is associated with adjusting a performance before any high damage is done. For example, the car's movements are navigated by a driver continuously. Also, a driver adjusts the steering of its car continuously.
- This direction for both the examples depends upon the obstacles, destination, and many more. Usually, you will find a control chart in a factory. This is an example of concurrent control. So, this control occurs when the activity is still in the process.

Feedback Control

- Any managerial system that is good controls itself in the form of information feedback. This discloses errors in accomplishing goals and thereby initiates the proper corrective action. Thus, feedback is the process that adjusts future actions based on the information about past performance. Although feedback is done after the process, it is a very important part of the control process.
- Feedback permits the manager to use the information about the past performance by bringing the future performance in line with the objective that is planned.
- Thus, testing the validity and its appropriate standards is helped by post control.
- Thus, to make it more effective and meaningful, it is required to analyze the post-performance.

Feedforward Control

- This involves evaluating the various inputs. Feedforward follows a very simple principle that any organization is not stronger than its weakest link. For example, when a machine is not working properly then the operator will look for some critical components to check whether the machine is working or not.
- Thus, the same logic is applied to feedforward control as well. The main example of feedforward control is a preventive maintenance program. This system is employed to prevent the breakdown of any machinery. Another example of this can be considered as policies. Policies are formed in a country to prevent any critical problem from happening.

Effective HR control techniques

1. Communicate, do not command
2. Build relationships
3. Goal setting and development opportunities
4. Nurture teamwork
5. Appreciate and reward a job well done
6. Confrontation isn't always bad
7. Review hiring and recruitment practices

ICT tools for effective control of engineering projects and organizations.

1. Project Management Software
2. Version Control System
3. Testing and Debugging Tools
4. Documentation Tools
5. Communication and Collaboration Tools
6. Learning and Development Tools
7. Consider the team's experience

Thank You
