

Assignment 1

1. Explain what is data science? How can we discover knowledge from the data?
2. Differentiate between structured and unstructured data with examples.
3. Explain the EDA process in Data Science.
4. What is data cleaning? Explain different ways of handling missing data with examples.
5. Why is data discretization necessary in data science? Differentiate between standardization and normalization.
6. Explain what is regression? Determine the missing value using linear regression.

X1	60	62	67	70
X2	22	25	24	26
Y	140	155	159	?

7. Explain how you determine the best fit-line.
8. Differentiate between categorical and numerical data with examples. Also explain which type of data visualization is suitable for numerical data and categorical data.
9. What is power law? Differentiate between normal and binomial distribution.
